## Snow Hawthorne

8-11

- **Category:** Shrubs
- **Type:** Broadleaf Evergreen
- **Exposure:** Part Sun / Part Shade
- **Blooms:** Spring
- **Flowers:** White
- **Fruit:** Dark Blue
- **Foliage:** Dark Green
- **Form:** Spreading
- **Maximum Growth:** Approx. 3' h x 5' w
- **Zones:** 8 to 11
- **Drought Tolerance:** Moderate
- **Scientific Name:** *Raphiolepis indica* 'Snow'
- **Usage:** Accent, Foundation, Foreground, Mass

### Introduction

The Snow Hawthorne is a slow growing, medium to large (3' height), evergreen shrub ideal for any sunny garden. The neat, compact growth habit seldom needs pruning. High salt-tolerance makes any Indian Hawthorne especially useful for seaside plantings.

### Use and Management

Use the Snow as a dense, large-scale informal hedge, foundation plantings or as a large foreground mass planting under trees or Crape Myrtles. Plant the Snow as a large accent plant in small areas, or mass plant in larger beds to produce a spectacular splash of spring color. Hawthorne's are an excellent substitute for Azaleas in full sun situation. The rich, grey-green leaves are set off by a profusion of white flowers appearing in springtime. A second, less pronounced flower display maybe produced in the fall. Flowers are followed months later by somewhat showy, small, purplish-black berries.

Indian Hawthorne does best in well-drained soils and tolerates drought conditions well. Plants will not be as dense or flower well if grown in partial shade. In addition, plants in less than 6 hours of sun often lose foliage due to leaf spot disease. This is a perfect low-maintenance small shrub in the sun.

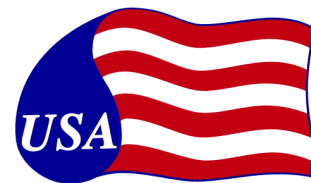

### Planting

#### Instant Landscape

- Plant 24" OC for an instant landscape with a good budget.
- Spec 5 or 7 gal containers

#### Normal or budget Landscape

- Plant 30" – 36" OC for budget landscapes.
- Use 1 gal or 3 gal containers
